

Theme

To save life of mushroom – hunters an appropriate application is needed.

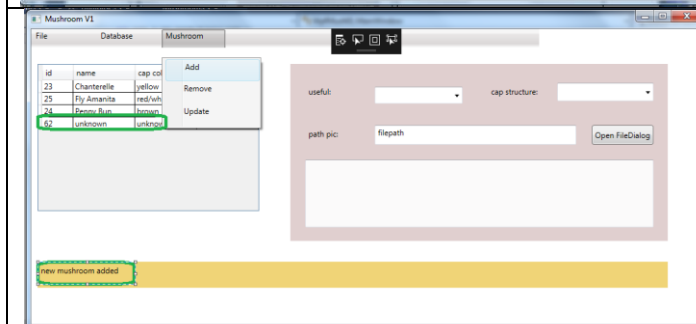

Features

- Working with SQL-Commands directly

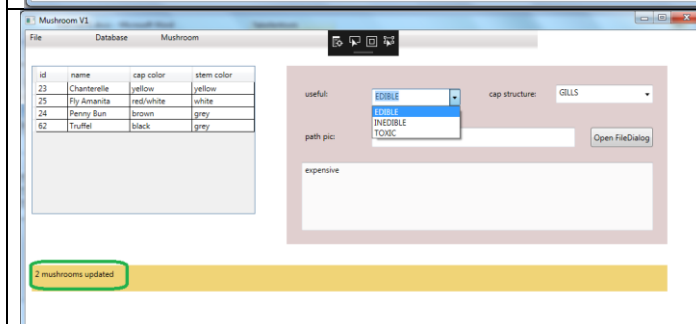

User's View

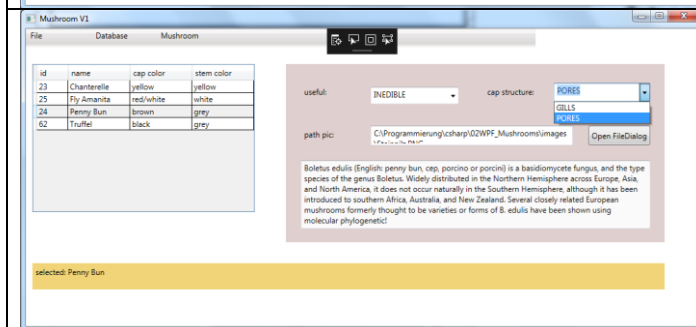

- at the beginning we load the database

- selecting “Add” inserts a new mushroom with default values
- id is Oracle's sequence

- updating properties (except id)
- of as many mushrooms as wanted
- then press UPDATE
- and only updated mushrooms produce an UPDATE on database

- ... load database again
- Additional features:
 - delete
 - save to XML

Developer's Hint

- solution doesn't need checking database updates in background (no concurrency included in this version)
